SLIM-FACE-LIFT
FACE CONTOURS RESHAPING
AND LIFTING EFFECT

SLIM-FACE-LIFT / DUAL ACTION: FACE CONTOURS RESHAPING AND LIFTING EFFECT

Faced with an increasingly strong demand for soft cosmetic techniques aimed at combatting the aging effects, the number and quality of 'non-surgical' solutions have evolved considerably in recent years.

SLIM-FACE-LIFT treatment has been developed for women and men looking to effectively fight against the aging signs, without undergoing to heavy surgical treatment and preferring a natural result. This treatment method is inspired by two techniques well-known in anti-aging cosmetic medicine: liposuction and the tensor thread face lift.

SLIM-FACE-LIFT is a real alternative to invasive medical surgery thanks to:

- The use of the tissue suction technique via suction cups, together with a slimming active ingredient, developed to quickly facilitate the fat breakdown.
- The stimulation of the natural biological process for tissue reconstruction and the restoration of dermal support fibre anchoring points, in order to obtain a better hold of the skin tissue for a lifting effect.

SLIM-FACE-LIFT treatment directly targets the heart of adipose cells, by limiting their storage activity and stimulating the fats breakdown. It also targets dermal cells, stimulating the production of anchoring fibres for the skin's support and cohesion. The aim is to treat the sagging and slackening of the different areas of the face by repositioning volumes around the cheekbones and the face contours.

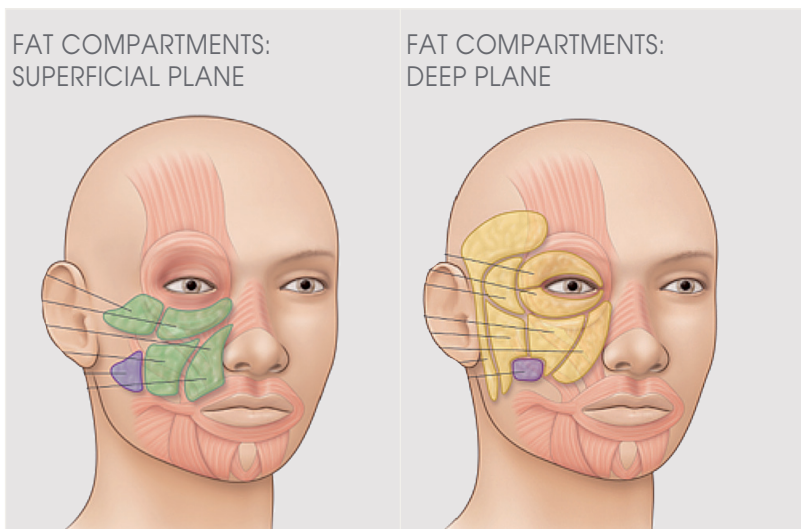

ALTERNATIVE TO INVASIVE MEDICAL SURGERY

FACE MORPHOLOGY: FAT DISTRIBUTION

Correction of facial skin aging is the main reason for cosmetic consultations. This demand, which has become a social phenomenon, has developed alongside the remarkable progress in non-surgical, non-invasive therapy.

Aging is not limited to the superficial layers of the skin, but also concerns the underlying tissues:

- Skin muscles,
- Adipose tissue which ptosis and atrophy,
- The bone support which weakens.

The decrease in the skin's support fibres during skin aging is also accompanied by a change in the facial fat distribution.

These effectively undergo an inward curvature and tend to migrate along the muscles, under the effect of gravity. The skin thickness begins to change, causing the appearance of jowls and folds around the nose and lips. In some areas, the face may become hollow and emaciated: largely on the lips, temples and cheeks. Elastin and collagen fibres become fewer and fewer, and increasingly fine. Their structure becomes disorganised, while the skin loses resistance, elasticity and firmness, and begins to sag.

MOLECULAR MODELING AND RESHAPING FACE CONTOURS

This is a software program making it possible to digitally reconstruct, and therefore model, the three-dimensional structure of molecules and integrate them into their environment, in order to study their interactions. Thanks to this molecular modelling technique, scientists were able to focus on two specific polyamines responsible for fat storage, developing new types of slimming active ingredients. This perfectly demonstrates how scientific research can be successfully applied to cosmetics.

Adipose tissue cells, called adipocytes, synthesise triglycerides from glucose and fatty acids and store them in lipid droplets. This process, called lipogenesis, involves several steps, each of which requires the action of specific enzymes.

Two polyamines, spermine and spermidine, intensively stimulate the activity of most of these enzymes.

The new focus in laboratory research work has been to develop an effective molecule for the inhibition of these two polyamines, spermine and spermidine.

In fact, if they are blocked, it leads to a sequence of biochemical reactions within the adipose tissue, inhibiting the lipogenesis process and stimulating lipolysis pathways, and consequently, an effectively visible action in the decrease of adipose tissue.

After numerous studies, the sulpho-carabiose family has been shown to have the highest potential for trapping spermine and spermidine. In fact, through their structural complementarity, sulphocarabiose perfectly interlocks with these two polyamines: thereby inhibiting their efficiency. By trapping spermine and spermidine, reactions with adipocyte enzymes are reduced, resulting in a significant decrease in fat storage (lipogenesis) and increased fat release from adipocytes (lipolysis). This therefore results in an effectively visible action, decreasing adipose tissue.

Our laboratories have selected a particularly effective sulpho-carabiose: SLIM-EXCESS. This has been created from the selection of marine oligosaccharides, obtained from red algae, which work directly at the heart of fat cells by specifically trapping spermine and spermidine.

IN-VITRO AND IN-VIVO TESTS

The work carried out on SLIM-EXCESS made it possible to obtain a significant reduction of 9.1% in the double chin area after just 4 weeks of treatment, with a 2% concentrated serum applied on 26 female volunteers aged over 45 years, with sagging cheeks and chin.

SLIM-EXCESS

- 3 combined slimming actions:
 - Lipogenesis inhibition,
 - Lipolysis activation,
 - Adipogenesis differentiation inhibition.

- Visible and measurable reshaping effect on the face oval in-vivo tests in 4 weeks:
 - Angle of inflection of the chin/cheeks,
 - Double chin area,
 - Skin's biomechanical properties: increased skin elasticity.

After 12 weeks of applying SLIM-EXCESS®, the results show a clear improvement in the elasticity and firmness of the face oval. All parameters studied during these tests have confirmed the action of restructuring the oval of the face and its firmness in only 12 weeks, through an action at the core of fat cells to limit their storage and stimulate the elimination of fats.

WORKING WITH SUCTION CUPS

As a result, we can notice:

- An improvement in collagen renewal: better facial tone,
- Muscle stimulation,
- Lymphatic circulation activation,
- Skin pigmentation reduction.

THE SKIN IS THEREFORE REGENERATED,
WITH A REFINED SHAPE AND VISIBLY REJUVENATED.
THE RESULTS ARE IMMEDIATELY VISIBLE.

FOCAL ADHESION AND WEAKEN SUPPORT FIBRES

- Lifting effect by focal adhesion, inspired by 'Aesthetic Surgery of tensor threads' in order to obtain a better hold of the elastic fibers of the skin.

FOCAL ADHESION

In cell biology, and more specifically in the dermis, focal adhesions are large assemblages of macromolecules within the cell membranes of fibroblasts (fixed points) and of the extracellular matrix: the site of various interactions between dermal cells.

Focal adhesions group together different proteins: talin, vinculin, integrin, which are themselves linked to other support fibres, such as actin. These proteins all have precise and determining roles in focal adhesion.

- Talin, found within cells, is the essential interface between the extracellular matrix and the various focal adhesion proteins: integrin, vinculin and actin. The latter is itself essential for cellular movement and the maintenance of the cell's structure.
- Zyxin facilitates the assembly of actin filaments.
- Vinculin stabilises cells among themselves and promotes the cells bonding to the extracellular matrix.

These are essential for the exchanges of the various messengers involved in ensuring the balanced functioning of the dermis, and is therefore vital for skin cohesion. As such, they are involved in the production of all support

fibres, and form the foundations of the skin's firmness, elasticity, resilience and regeneration.

Between the ages of 20 and 60, fibroblasts decrease by half, resulting in a reduction in the synthesis of these adhesion proteins: the extracellular matrix loses its cohesion, resulting in a disturbance in the transmission of intercellular messages, therefore distorting the skin's balance.

The establishment of these focal adhesions, their maintenance and their functioning are, of course, controlled by genetics. Fibulins are a fundamental group of proteins within the extracellular matrix. They play a supporting role in dermo-epidermal adhesion and in binding to other proteins within the extracellular matrix. The FBLN5 gene provides instructions to fibroblasts to make a protein called fibulin-5. This is, then, excreted in the extracellular matrix, where it plays an essential role in the organisation of elastic dermal fibres. These thin bundles of proteins provide strength and flexibility to the skin tissue. In intercellular spaces, elastin molecules are linked to each other by specific aminoacids. This is the crosslinking of elastin fibres. The formation of these amino acids is catalysed by a fundamental enzyme: lysyl oxidase-like or LOXL-1, produced by fibroblasts. This enzyme is essential for crosslinking – in other words, the assembly of collagen and elastin fibres within the extracellular matrix – allowing them to fulfil their roles of support, flexibility, and resilience, while also contributing to regenerating and repairing the skin.

LIFTING VIA THE STIMULATION OF FOCAL ADHESION: UPLEVITY

UPLEVITY is a peptide obtained via biotechnology which makes it possible to counteract the harmful effects of time, and to effectively fight the force of gravity which results in a sagging of the tissues, a heavier and lower face, and the appearance of jowls.

IN-VITRO AND IN-VIVO TESTS:

UPLEVITY boosts the production of collagen, elastin and assembly proteins in the ECM (extracellular matrix) to facilitate cohesion of cells and adhesion from the dermis to the epidermis. In fact, by working in the nucleus of fibroblasts, UPLEVITY gives genetic expression to the LOXL1 and FBLN5 proteins involved in skin firmness and resilience.

- UPLEVITY also significantly increases the rates of collagen and elastin by 47%.
- UPLEVITY increases skin firmness and reshapes the face contours in 56 days.
- 95% of volunteers report a lifting and restructuring effect in the skin.

After a treatment, the face contours are refined – completely reshaping – with lifted skin which reveals a more youthful and dynamic appearance.

Depending on the specific needs of each customer and as part of the personalization program ANTI-AGING EXPERTISE skincare, for a perfectly targeted action:

- Results can be maintained through the continued use of home care products and by offering regular SLIM-FACE-LIFT maintenance treatments.
- The skin having been completely restructured, it will be physiologically ready to undertake the rest of the anti-aging process:

GENXSKIN

Activation of 14 genes for a visible anti-aging effect

SKINJEXION

Anti-free radical
Smooth and fill wrinkles

SUPREME

Deep and firming skin
regeneration treatment

SLIM-FACE-LIFT SKIN CARE PRODUCTS AT HOME

ELASTININE CLEANSING MILK - 250ml / Ref. E2113
Revitalising Cleansing Milk

ELASTININE CLEANSING LOTION - 250ml / Ref. E2114
Revitalising Cleansing Lotion

DUO FORCE SERUM / Ref. E2115:

- **LIPO DRAIN SERUM** - 30ml / Ref. E2116
Di-Saccaride Complex – Powerful Lipolytic
- **FIBRO ELASTIC SERUM** - 30ml / Ref. E2117
Zyxin Booster – Ultra Tensor

INTEGRINE- NUTRITION - 50ml / Ref. E2120
Re-Structuring and Nourishing Skin Care Cream

FIBRILINE-CONFORT - 50ml / Ref. E2118
Re-Structuring and Moisturizing Skin Care Cream

ACTININE-TENSIVE - 50ml / Ref. E2119
Re-Structuring and Lifting Skin Care Cream

PROFESSIONAL PRODUCTS

ELASTININE CLEANSING MILK - 500ml / Ref. E2129
Revitalising Cleansing Milk

ELASTININE CLEANSING LOTION - 500ml / Ref. E2130
Revitalising Cleansing Lotion

INTEGRINE- NUTRITION - 150ml / Ref. E2132
Re-Structuring and Nourishing Skin Care Cream

LYPOLYSINE CREAM MASK - 200ml / Ref. E2131
Pro-Elastine Fibre - Face Massage

FOKAL ADDESION MASK - 220g x 4 / Ref. E2133
Facial Design Technology

KIT 4 SESSIONS / Ref. E2134:

- **ADIPOSE SCRUB** - 4ml x 4 / Ref. E2138
Sulfo-Carabioz
- **LIPO DRAIN SERUM** - 2ml x 4 / Ref. E2135
Di-Saccaride Complex – Powerful Lipolytic
- **FIBRO ELASTIC SERUM** - 2ml x 4 / Ref. E2136
Zyxin Booster – Ultra Tensor
- **HYALURONIC SERUM** - 2ml x 4 / Ref. E2137

SLIM-FACE-LIFT PROFESSIONAL PROTOCOL

DOUBLE FOCUS: SLIMMING AND LIFTING TREATMENT

Inspired by cosmetic medicine techniques, SLIM-FACE-LIFT consists of a harmonious restoration of facial volumes via the fat reduction and tightening of sagging areas. It provides an overall rejuvenating effect on the face, with a redefined shape, and balanced curves and contours.

1. CLEANSING

Cleanse the face and neck with ELASTININE CLEANSING MILK E2129, then with cotton pads soaked in ELASTININE CLEANSING LOTION E2130.

2. EXFOLIATION

With your fingertips, apply ADIPOSE SCRUB E2138 on the face and neck. Proceed in circular movements, then moisten the fingers and continue to exfoliate. Rinse off with a damp sponge, then complete with ELASTININE CLEANSING LOTION E2130.

3. HYALURONIC SERUM APPLICATION

Apply the whole vial of HYALURONIC SERUM E2137 all over the face and neck. Proceed with smoothing movements across forehead wrinkles, eye contours, nasolabial folds, and wrinkles around the mouth and neck.

4. LIPO DRAIN SERUM APPLICATION

Apply the whole vial of LIPO DRAIN SERUM E2135 all over the face and neck. Then, proceed with the modeling movements.

5. FIBRO ELASTIC SERUM APPLICATION

Apply the whole vial of FIBRO ELASTIC SERUM E2136 all over the face and neck. Then, proceed with gentle movements on the forehead wrinkles, eyes contour, smile lines and wrinkles of the neck.

6. MASSAGE

Apply a thick layer of LYPOLYSINE CREAM MASK E2131 all over the face and neck. Proceed to a short massage.

7. PREMEDIKL FACIAL LIFT PUMPER

Proceed with the vacuum technique of the tissues with the PREMEDIKL FACIAL LIFT PUMPERS E2335, by starting with the neck and up towards the cheeks. Smoothing movement from the centre to the sides. (See technical protocol).

8. MASK APPLICATION

- Apply a very thick layer of LYPOLYSINE CREAM MASK E2131.
- Place 2 cotton pads soaked in BIOPTIC SOOTHING LOTION E234 over the eyes.
- Place a gauze over the entire face and neck. Ensure that it has fully adhered to the skin, then pull slightly upwards to perfectly sculpting to the face and neck.
- Measure and cut a strip from the elastic gauze roll. Place the middle of the gauze strip below the chin, then stretch upwards across each side of the face to make a knot at the top of the head.
- Mix one sachet of FOKAL ADDESION MASK E2133 with 110 ml of cold water until obtained a smooth and homogeneous paste.
- With a spatula, quickly apply the mask in a thick layer over the entire face, applying a thin layer to the neck.
- Leave on for 20 minutes. Then, gently remove by gently peeling the mask along the edges.
- Cleanse the whole face and neck with a damp sponge, then apply ELASTININE CLEANSING LOTION E2130.

9. LIGHT MASSAGE

Proceed a slight shaping massage with INTEGRINE-NUTRITION E2132 cream over the whole face and neck.

LENGTH OF TREATMENT: 1 HOUR 15
1 COURSE = 4 SESSIONS
TREATMENT FREQUENCY: ONCE A WEEK

SLIM-FACE-LIFT SKIN CARE LINE

| PRODUCTS | FUNCTIONS | ACTIVE INGREDIENTS & ACTIONS |
|--|---|---|
| ELASTININE CLEANSING MILK RETAIL: 250-ml bottle Ref. E2113 PROFESSIONAL USE: 500ml bottle Ref.
